                  artificial (IA) se refiere a la creación de sistemas informáticos y algoritmos que pueden realizar
                  tareas que normalmente requieren la inteligencia humana, como el aprendizaje, la resolución de

                  informáticos pueden ser diseñados para simular la forma en que el cerebro humano procesa la
                  información y toma decisiones. Esto se logra mediante la creación de algoritmos y modelos matemáticos
