

Edit Prompt

You are a senior QA test case reviewer.

Review the following test case document.

Test Case:

{testcase_document}

Evaluate for:

- Completeness
- Clarity
- Missing validations
- Edge cases
- Test design best practices

Return the answer in this exact format:

List of Issues

- ...

Suggestions for Improvement

- ...

Improved Version of Test Case

Provide a rewritten professional test case with:

- Test Case ID
- Title
- Preconditions
- Test Data
- Steps

{ } Prompt Variables: `testcase_document`

Component Output

Inspect the output of the component below.

Outputs Logs

```
## List of Issues
- Test Case ID FT_001 is missing a clear description of the test case.
- Test Case ID FT_002 is missing preconditions and test data.
- Test Case ID FT_003 is missing expected result clarity. The expected result should be more specific, e.g., "System should display an error message indicating that the beneficiary account is invalid."
- Test Case ID FT_004 is missing test data and expected result clarity.
- Test Case ID FT_005 is missing expected result clarity. The expected result should be more specific, e.g., "System should display an error message indicating that the transfer amount is zero."
- Test Case ID FT_006 is missing expected result clarity. The expected result should be more specific, e.g., "Application should display a session timeout error message."
- There is no clear indication of the test environment, e.g., browser type, operating system.
- There is no clear indication of the test data, e.g., account numbers, amounts.
- The test cases do not cover all possible edge cases, e.g., transfer amount less than the minimum allowed amount, transfer amount greater than the maximum allowed amount.

## Suggestions for Improvement
- Add a clear description of each test case, including the purpose and scope of the test.
- Ensure that all test cases have preconditions, test data, and expected results.
- Use clear and specific language in the expected results.
- Indicate the test environment and test data in each test case.
- Consider adding more test cases to cover all possible edge cases.
- Use a test design framework, e.g., Equivalence Partitioning, Boundary Value Analysis, to ensure that all possible scenarios are covered.

## Improved Version of Test Case

### Test Case ID: FT_001
### Title: Verify successful fund transfer
```

Close

Component Output

Inspect the output of the component below.

Outputs Logs

```
## Improved Version of Test Case

### Test Case ID: FT_001
### Title: Verify successful fund transfer
### Preconditions: User has a valid account with sufficient balance.
### Test Data: Account number, beneficiary account number, transfer amount.
### Steps:
1. Login to the banking app.
2. Select the transfer option.
3. Enter the beneficiary account number and transfer amount.
4. Click submit.
### Expected Results: The transfer should be successful, and the user should receive a confirmation message.
### Priority: High
### Type: Functional

### Test Case ID: FT_002
### Title: Transfer amount greater than balance
### Preconditions: User has a valid account with insufficient balance.
### Test Data: Account number, beneficiary account number, transfer amount greater than balance.
### Steps:
1. Login to the banking app.
2. Select the transfer option.
3. Enter the beneficiary account number and transfer amount greater than the balance.
4. Click submit
```
